# - Introduction -

This Travel Guide shall serve as a trustful and concise source of information on all nature trails in the core area of the Central Baltic Region in Latvia, Estonia and Finland which are accessible to all – persons with reduced mobility, visual impairment, seniors and families with baby-strollers etc.

The Guide will take you through 100 accessible nature trails together with more than 300 other trails and sites, which are located in the nearby area and might be of interest while travelling in the region. The accessible trails are presented on the right side of each layout, while the map of the nearby area, as well as the key information on the other nearby trails and sites are presented on the left.

Trail accessibility level is classified in three colours:

- green colour the trail is accessible to all;
- orange colour the trail is more challenging due to some steeper slopes, uneven path surface etc., therefore assistance is recommended;
- grey colour the trail is not handicap-adapted.

The nearby long-distance hiking trail sections are highlighted in blue  $\bigcirc$  (Baltic Coastal Hiking Trail) and yellow  $\bigcirc$  (Forest Trail). For detailed information on the route and facilities visit www.baltictrails.eu.

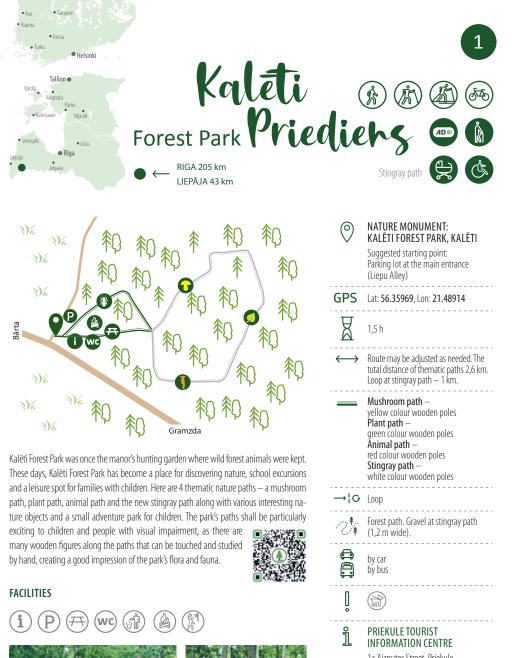

The start of each trail is marked with coordinates from the nearest parking lot of the trail. Availability of toilet facilities at trails is marked with "WC", but keep in mind that most of the toilets in nature are dry closets. In order to get more accurate information on the specific trail and its accessibility, visit mapeirons.eu or use the QR code (scanning the code with your phone camera will open the link, which contains the trail's GPX file and video from the relive app with the trail's route, landscape and photos).

With this Travel Guide the authors' team would like to share their passion for nature and hiking and do hope that this Guide inspires everyone for healthy adventures outdoors!

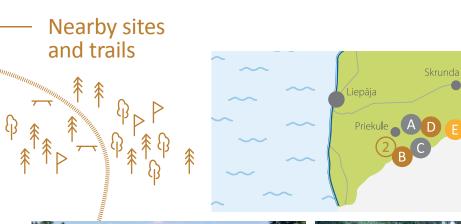

Have a break. Go to nature.

Bernāti Beach Boardwalk

(

RIGA 224 km LIEPĀJA 17 km

A brand new wooden boardwalk, built in 2019, constructed in two stretches, allowing to walk the path loop-type. One of the stretches is a little bit narrower and has stairs, the other is wider, without stairs. The path leads to a viewing site at the end of the trail, with a nice and spacious resting deck chair platform, where one can lie down, take a breath from the daily

rush and enjoy the peaceful seaside landscape of Bernāti nature park. During summer a seasonal boardwalk is available allowing people in wheelchairs and parents with baby-strollers access the beach and almost reach the water.

### FACILITIES

liepāja Seaside Park

- RIGA 230 km

Liepāja Seaside Park is one of the largest dendrological parks in Latvia with more than 170 local and foreign tree species. It is 3 km long and offers wide recreational and walking opportunities for the whole family. There is a number of noteworthy interest objects in the Park – concert stage Püt, vējiņil, the Swan Pond with fountains, a small island and bridges, the memorial site to Liepāja rock band Līvi – musical and illuminated environmental design object Spoku koks (Ghost tree), as well as the biggest drums in Latvia, reminding that Liepāja is the capitol of Latvian music. There is also the NBA basketball court in the Park constructed as a gift from the famous basketball player Kristaps Porziņģis, who was born in Liepāja. The Park is located on the sea coast with a wide beach area, which has got the Blue flag award certifying its good quality. It is also the first beach in Latvia, which is adapted for people with visual and movement impairment to get to the water and even enjoy a swim, using the special equipment available at the Rescue station.

The trail stretches along the circles of the Alande River through the town of Grobiņa. There is a number of information stands along the route, each telling of the history of Grobina. On the way you shall see the Grobina castle mound, the old town and the ancient burial grounds. Grobina, once called as Seeburg (Sea castle or Lake castle), is the first inhabited locality in Latvia recorded in written sources. It has been inhabited already in the Stone Age and later – at the beginning of the 1st century AD – Grobina becomes the center of the Ancient West-Balts tribe Curonians. Up to the 9th century Grobina had been a vast, city-like settlement of Curonians and Vikings, well known in the world of that time. The park and the trail are suitable for walking, cycling, and is accessible for parents with baby-strollers and for people in wheelchairs with an assistant. You may also enjoy the Alande River Park by boat.

Ventspils Seaside Park is a wide and well-equipped park near the sea in Ventspils offering recreational and walking opportunities for whole family. There are many walking paths curling over the park with a specific Anchor trail, which is 730 m long and presents the largest collection of real ship anchors in Baltics. The greatest of them is 23 tons heavy and 6 meters tall. There is also a small train at the Seaside Open-air Museum running through the Park along the narrow-gauge railway line.

For wheelchair users and parents with baby-strollers, to get down to the seaside, the most convenient shall be the entrance No 6, located in the area of the park. Make sure to visit also the Promenade at the South pier stretching along the coast of the River Venta, with 14 buoys on it. There is an information board at each of the buoys, telling what this buoy is for.

Kolka pine trail gives an opportunity to enjoy an easy, pleasant walk through a gorgeous pine forest, grev and white dunes and, of course, the seashore. The trail is remarkable for its hundred year old, forked, low branched pine trees covered with sand for up to 2-3 m. The age of the trees can be guessed from their size, as well as the lichens and moss on the branches. Here you can also see the oldest dunes that have overgrown with forest. In the forest and dunes you can also see the typical plants, such as bilberries, heather, crow-

accessible with an assistant

living in the old trees. Along the route, there are two viewing platforms and a 15 m high watching tower to observe the sea views and birds. The beach sand area is not accessible, so it will not be possible to reach the water in a wheelchair.

Roja beach is one of the most comfortable beaches in Latvia and its boardwalks — of the few fully accessible to everyone — people in wheelchairs, parents with baby strollers, seniors etc. There are also football and volleyball courts on the beach and a spacious playground for children. The informative stand contains information also in Braille with the tactile map of the beach.

The route can be adjusted as needed. The long option is to walk along the wooden boardwalk, the sea-coast and the North Mole with a lighthouse at the end. The boardwalk stretches along the oldest dunes that have overgrown with forest as well as the grey dunes. There you can notice the various coastal plants growing here. The route can be continued back along the sandy beach. Most active travellers can stretch out the legs on the boulders of the North Mole and walk up to the very end of the Mole.

It should be taken into account that the beach sand area is not accessible to people in wheelchairs, so it will not be possible to reach the water.

mer, when the swamp forest blossoms with gorgeous spring flowers, Marsh-marigolds and lots of forest birds can be seen and heard around. Yet the trail offers a nice walk also in the fall, when herbs gradually turn yellow and the variety of mushrooms and mosses on bare tree trunks stand out. In winter, the wet dams and the frozen river is covered with snow and feature the footprints of different animals.

Almost all woodpeckers found in Latvia, including the park symbol - white-backed woodpecker, recognise the black-alder swamp as a suitable habitat.

The wooden boardwalk in the black-alder swamp is connected with the Forest trail, which goes through a dry deciduous forest. Its length is around 600 m and it stretches along the paths of historical Kemeri health resort park until the sulphurous spring pavilion The Lizard "Kirzacina" (~ 800 m) and the centre of Kemeri (~ 1 km). The Forest trail is not accessible to people in wheelchairs.

Inis is a nature trail, where to enjoy nature, water, silence, peace and have a good walk very close to Riga. Suggested in spring, autumn and winter, as in summer this is a very popular place to visit! The trail can be started by heading backwards and continuing the way along the right coast of the lake or starting straight from the parking lot by heading to the left. Going on the right, the trail at first stretches along the asphalt paving and soon the first information stand appears with the picture of the quarry and the route line. When reaching the farthest point of the quarry, the trail continues along the gravel-covered path and when getting on the other side of the quarry – continues along the wooden boardwalk, which gives a truly scenic walk along the left coast of the quarry.

Those who're up to for some more activity may go on a 5 km distance along the recently constructed cycling way, which connects the Līdumu quarry with the Olaine Forest Park, or drive to the Forest Park by car and then hike for at least three more kilometres across the park paths. The Forest Park is worth a visit, here is a modern and spacious children playground, lots of walking paths and the highest graffiti artwork in the Baltics on a 45 m high water tower.

### resting area, incl. fire-place site (for a fee), Æ benches, not adapted (wc) accessible

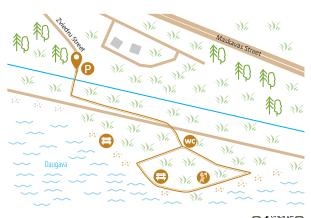

← RIGA 13 km

A beautiful, well-equipped resting place on the bank of the Daugava River to take a nice walk, sunbathe, swim and have a picnic with friends. The beach is equipped with outdoor exercise devices, children playgrounds, resting areas with tables, benches and campfire sites. During the summer season, there is a rescue station at the beach working and changing cabins available.

Around the year 1380, a church was built in this area, called by the name of the Livonian spiritual protector Saint George (in Latvian - Sv. Juris). During the wars, the church had several times been destroyed, but then restored again, unfortunately after the World War II it was left unattended and had been gradually demolished. During the construction of the hydroelectric power station in 1973, the remains of the church were blown up, but the ruins remained outside the flood zone. Today, the church ruins can still be seen at the Salaspils beach.

Beach paths are accessible for wheelchair users with an assistant (walk may be slightly hindered because of pebbles and a bit steep slope at the beginning of the beach trail). Beach equipment and amenities are not specially adapted. Beach toilets are not accessible either.

(B

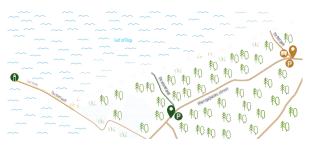

(36)

Mangalsala is easy to reach from the city centre, therefore, similar to the Daugavgrīva nature trail, this is an ideal destination for those who want to have a short break out from the city fuss and enjoy nature.

to take a tour in the nature park, to see its forests and dunes, as well as

The first path allows to enjoy a nice walk through the pine forest. The path is made as a wooden boardwalk, partly accessible to people in wheelchairs (assistant is suggested). The path goes to the sea, however it is not possible to reach the beach itself and enjoy the sea view.

The second path allows to enjoy not just the walk through the pine forest to the sea, but also crosses a small swamp with characteristic bog view. Turning on to the trail it starts as a well-trodden path, whereas the further stretch is a good quality wide wooden boardwalk. This path is adapted for people in wheelchairs and it is also possible to reach the beach and see the famous wreck of the Swedish ship Lady Kotlin, once ran aground here in 1951. The third path leads to the East mole and has not been made as an accessible trail, however might be possible to hike and even reach the lighthouse with the help of an assistant.

Līgatne Nature Trails are a well-established network of trails in the traditional forest landscape of Gauja National Park. Here you can see intact landscapes and various species of wild animals living in Latvia – bear, fox, lynx, elk, deer, boar, badger, racoon dog, marten, aguirrel, hare, polecat, dormouse and owl.

The total distance of paths is about 4-5 km, with various difficulty levels. There are two stretches accessible to wheelchair users - starting form the Nature Education Centre Pauguri towards: 1) the bear lodging (300 m); 2) the foxes lodging (600 m).

People with disabilities are allowed to enter the area with a car.

6

Lēdurga Dendropark has a very interesting history. It has mainly been created by one man - Arvīds Janitens, who in 1973 on his own initiative started to plant trees, bushes and perennials in a previously underutilised rural area. Now more than 1000 subspecies of different trees and bushes have been growing here, including many North Vidzeme climate fragile tree plants. This is the largest collection of non-native origin tree plants in Latvia and it has become a protected natural and cultural hisotrical object.

There are many resting areas at the park that will satisfy any taste. Therefore it is possible to organise some event here (a picnic with friends or family, a wedding ceremony etc.) and choose an appropriate resting site - should it be a twig hut with benches and a fireplace site, a fine gazebo for photo shoots or a spacious tent for more people. There are also many different interest objects in the park – wooden sculptures, a labyrinth, a horoscope circle, Mudurga boulder etc.

There is one main path stretching through the park, which is also accessible to people in wheelchairs, with many paths branching off it that allow to admire the various trees, bushes and plants growing in the park, as well as the interest objects here. The total area of the park is 47,2 ha and the overall length of the paths exceeds 2,5 km.

The 2,8 km forestry trail offers relaxation and information about forest life, introduces forest management and conservation. The trail is well suited for walking and recreational sports.

www.loodusegakoos.ee

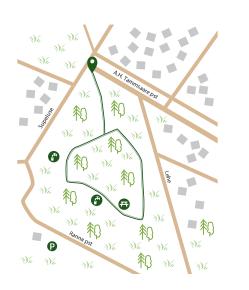

The green areas, boulevards and shady parks are an integral part of Pärnu as a resort town. The Beach Park was established in 1882 and was declared a nature protection zone due to is wide variety of plant species. The park is located right beside the beach and is a popular place for a walk or just to relax.

Since the summer of 2010, the traditional park area has been divided into different areas by theme and usage: main square, art square, party games and peace square. The park area adjacent to the sea has a modern and safe playground for children. A fitness trail passes through the park, and there are plenty of places to have a picnic.

 $\longleftrightarrow$  6 km,  $\rightarrow$  |  $\bigcirc$  out&back, GPS Lat: 58.00699 , Lon: 24.71407

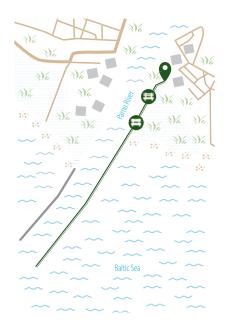

Pärnu has always been an important harbour. To prevent sand build-up in the mouth of the river, moles made of logs were built there in early 19th century, as ordered by merchants. After they collapsed, more permanent stone moles and shore reinforcements were built, in addition to dredging the fairway. Local farmers brought field stones for both moles from the surrounding area and the beaches of Kihnu Island. The construction work was completed in 1869. The 2 km long moles have remained unchanged and become popular walking destinations for holidaymakers. The mole on the left bank of the river has become the symbol of Pärnu. At the beginning of 2019, a new illuminated boardwalk was completed, starting at the Rannapark and winding along the Pärnu River. The half-kilometer-long light road built on the piles ends at a sandy beach near the mole. There are seating benches and bicycle racks on the trail. The new boardwalk quickly became a very popular walking spot for locals!

# Panga cliff

Panga cliff is the highest bedrock outcrop in western Estonia and the islands. The maximum height of the Siluri escarpment is 21,3 metres and it runs for about 2,5 km. Panga cliff is situated right on the coast, cropping up like a 'wall'. Its highest point used to be an ancient ritual site where people were sacrificed to the sea. Visitors of the nature reserve can admire breath-taking sunsets, have a picnic, watch birds, take beautiful nature photos, and have fun on the village swing. There is also a dolomite sundial. The road is gravel and the rest of the area is covered with lawn and grass. Tracks covered with wood chips have also been completed, but help is needed when moving in a wheelchair. Attention! There are no safety borders at the edge of the cliff.

GPS Lat: 58.56972, Lon: 22.29055

The only windmill park in Saaremaa that gives you an idea of windmills built at the beginning of the 20th century. Four of the five Angla windmills are typical trestle windmills, characteristic of the island of Saaremaa. One of the key elements of the Angla Windmill park complex is the Angla Heritage Centre, which was opened in 2011. At the centre you can test your skills at traditional handicrafts, take part in heritage culture events and taste Angla rye bread. The centre also teaches children the handicraft skills of their forebears.

There is no specifically marked hiking route, but one can walk in the area and visit the Angla Heritage Centre, which is also accessible by wheelchair (back of the building).

### Muhu Museum

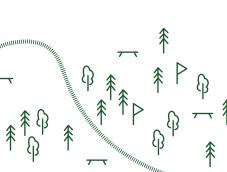

The village of Koguva on the west coast of Muhu island is one of the most outstanding examples of Estonian peasant architecture. The village with its unique landscape has somewhat exceptional history. Free peasants who were never subjected to serfdom used to live here. There are several attractions – farm architecture, Muhu folk costumes, an old village school, various exhibitions on Muhu history, art exhibitions, and a museum shop.

The museum was opened in 1973 at the birthplace of Estonian writer Juhan Smuuli at Tooma Farm. In 1990, it was named the Muhu Museum. The museum is in four farms. You can get tickets and a map of the village from Tooma Farm.

GPS Lat: 58.59548, Lon: 23.08312

Koguva village is the best preserved 19th century village in Estonia. All of the buildings are architectural landmarks. Most of the buildings date from the 19th century. The oldest buildings, dating to the 18th century, are in the middle of the village.

The museum complex comprises a wealthy seaside farm Tooma (Juhan Smuul, an Estonian writer, was born here) with all its outbuildings and tools, a former village school and a textile exhibition.

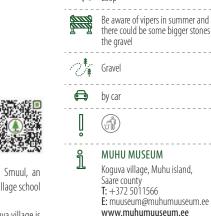

It should also be mentioned that aside from the one museum complex, Koguva village is a lived-in village. It is home to the villagers of Koguva.

The trail to the very end of Sääretirp is one of the most famous trails in Hiiumaa. It is an amazing narrow cape in the south part of the Kassari area. A gravel road surrounded by junipers leads you to the end of the cape. While walking to the end of the esker the land gets narrower and narrower, finally disappearing to the sea. Its higher parts are covered with vegetation, but the further one goes, the more a beach full of pebbles it becomes. Unique trees and shrubs grow there: honeysuckle, alder buckthorn, buckthorn, and snowball tree. There is an abundance of sea kale on the shores, which make the beach an amazing sight during the flowering period.

- Due to the fact that the land is used as pasture, the visitor must be aware of the domesticated livestock there. That is why there is an electric fence that the wheelchair user must open to get on the trail, otherwise one can use a narrow passage next to it. Approximately 500 m forward there is a gate one has to open. The gate is about 1 m wide and you have to manually push it.
  - Gravel, lawn. The trail is covered with loose gravel and partly grass. Due to loose gravel it is not the most comfortable trail for persons with disablilities. For a wheelchair user, assistant is recommended. For a wheelchair user is not possible to reach the far end of the trail.

# A Harju-Rätsepa windmill

Harju-Rätsepa windmill was restored in 2001. It is a typical post windmill of the Hiiumaa island. Windmills have been an integral part of Hiiumaa's landscape for centuries. They started to spread in the Western Europe in the 13th century and were in Estonia a couple of hundreds of years later. There is no specific trail, but one can see the windmill, have a picnic or try swinging on the traditional swing. The area is mainly covered with grass. The parking lot is covered with asphalt and there is a special parking spot for people with disabilities. An accessible dry toilet for wheelchair users (the width of the doorway is 90 cm, handrails are on both sides of the toilet seat).

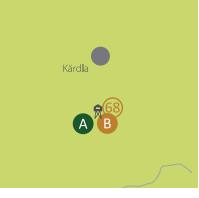

GPS Lat: 58.73685, Lon: 22.62585

# B Orjaku marina

Orjaku port in Hiiumaa was used as a fishing port already in the 17th century. Today, Orjaku is a recreational boat harbor. A fishing port for small boats has been built for fishermen. The port offers amazing views and is one of the most popular marinas in Hiiumaa. Next to the port is the Orjaku village house where concerts and other events are held during the summer season. A seasonal café and restaurant are open. There is a wheelchair accessible toilet and a shower. One can find a souvenir shop as well. Outside you can find a playground for the children. The whole area is asphalt or stone paved. Be aware of the rainwater gutter on the road and not to slip from the dock.

#### В Soera Farm Museum and Palade House of Rocks museum

Soera was a typical 19th century Hiiu household. A cottagethreshing barn, chimneyless smoke sauna, summer kitchen, storehouse, cellar, coach house and cowshed are all part of the farm museum. In all buildings, there are expositions of archaic tools and commodities. The buildings cannot be entered with wheelchairs, but it's possible to observe the buildings and Soera farm complex from the outside.

GPS Lat: 58.96995, Lon: 22.84834

### Paluküla health trails

Severl hiking trails, where you can walk, run, cycle, or ski - depending on the weather. Naturally, there is a sled hill. There is also a disc golf park with 18 baskets and 1,8 km illuminated trail.

← 1,8 km, 2,7 km, 3 km, 5 km, and 9 km, → ↓ ← loop, GPS Lat: 58.98846, Lon: 22.80683

The City Park is about 5,2 ha. The first part of the park was established already back in the 1860s, after the Kärdla church was finished. More trees were planted at the beginning of the 20th century and the "youngest" part of the park was planted in the 1970s. The main species of trees include the native ones - black alder, common ash, maple and linden, but there are also spruces, oaks, willow elms, and bushes like hazel, hawthorn, lilac and snowberry. The Park is close to the beach, therefore, when visiting, it is recommended to walk to the nearby Kärdla beach and Factory Square, just a couple of hundred metres from the park.

Kärdla Factory Square is one of the most important historical sites in the city. In 1830, the barons Ungern-Sternberg established a broad cloth factory in Kärdla. Nowadays the Kärdla museum is located on the factory square.

At the beach, one cannot access the seafront with a wheelchair, but the views are still beautiful.

### Allika hiking trail in Vormsi

Hiking trail is situated in the relatively moist and waterlogged area on the Vormsi landscape protection area. You will find signs and information boards throughout the trail. The trail is partly a dirt road; moist areas have boardwalks and bridges. In the wet seasons, the trail is muddy and difficult to pass. Rubber boots are the most suitable footware for passing the trail. The trail has a timber watchtower that is 2,5 m high.

This city route starts at the Paralepa beach parking lot. Paralepa beach has always been a sandy beach with one of the warmest water temperatures in Estonia. To access the water front, one might need assistance with a wheelchair to go through the sandy shoreline.

At the start of the route there is an accessible toilet. From the parking lot a wooden walking path leads to the beach and over a small bridge to a paved pedestrian road. The road then follows the seaside to the romantical old town of Haapsalu. The whole route is wheelchair accessible, but there is one uneven stretch. The last section of the path has many benches for a nice rest stop with a scenic view and the sease breeze. Overlooking the bay, one may spot many birds such as geese, swans, ducks etc. It is also a popular common place for the citizens to fish. The waterfront is not well accessible.

The splendour of Haapsalu, the famous Czarist era resort, is recalled by the seafront Promenade and its jewel — the Assembly Hall. Walk on the promenade and glance dreamily at the sea; check the time at the sundial and have a rest on the bench named for the world-famous composer Tchaikovsky. The promenade is also a popular place for the local wheelchair users for fishing.

The Promenade starts at the exotically named Africa Beach. There is a children's play-ground in the beginning of the route, and the town's only birdwatching tower. Near the end of the promenade there is a wheelchair skills training park and an accessible outdoor gym. Next to it is a special playground that is wheelchair accessible and adapted to children with special needs. The promenade is paved, spacious and well accessible.

### 

The Väike Viik is a small lake in the heart of the romantic old town of Haapsalu. The beautiful surrounding bay and picturesque sunset offer a fairytale-like experience.

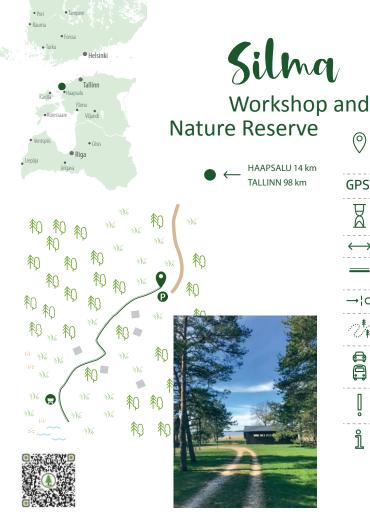

Väike-Viik is also home to various birds like swans and geese and ducks. A pedestrian path goes along the shore and is well accessible. Most of the route is paved with asphalt, but there are a few unpaved stretches. There are several benches for resting. There is also a small beach area and an accessible swimming spot with a special bridge going into the water. In summer the water is rather warm. In winter, if it is cold enough, children and adults can have a fun day on the Haapsalu Väike Viik skating rink, skating or sledding.

Silma workshop is a nature school located in Silma Nature Reserve. The unique features of the Silma Nature Reserve are the relict lakes of the Haapsalu bay and the Noarootsi peninsula, reeds and coastal meadows. Silma workshop offers nature education programmes, but the surrounding area of the workshop are open for all to visit and discover. There is a small birdwatching tower here and a mini-zoo with farm animals. This place offers breathtaking and scenic views.

There is a large unpaved parking lot from where an unpaved road leads to the study classrooms and the waterfront. Wheelchair users can go further down the road, when pre-arranged with the premises. Otherwise a road-block is ahead. Wheelchairs users are recommended to use assistance when exploring the area. The study classrooms have wooden ramps leading inside and there is an accessible toilet.

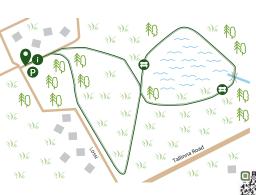

FACILITIES Recreational fishing in Silma Nature Reserve is prohibited from 1 March to 30 June (i) (wc) Small observation tower not accessible

Uuemõisa Manor Park is a protected park in Uuemõisa, Haapsalu. The park is large, consists of two areas, is freely designed, and grows into a parkforest. The manor park has been re-constructed on the basis of a map from 1936. There are paved walkways with several benches for a nice rest. There is also a small pond system and a wooden bridge. You can choose different routes to move around the park, as there is no specific trail marked. The park also holds a new disc-golf course.

### B RMK Liivanõmme study trail

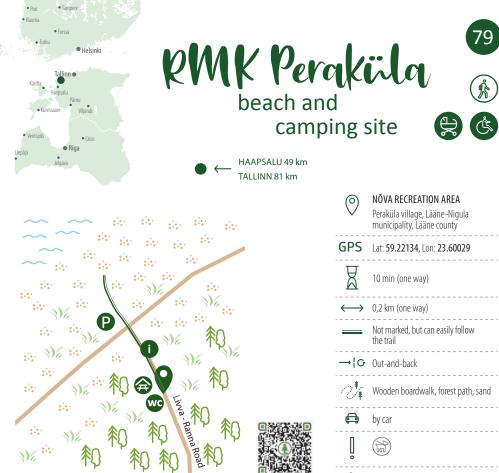

The trail starts and ends at Lake Allikajärv, passing the varied landscape characteristic to this area. There is much to discover both for nature observers and those interested in heritage. The signposted trail runs along the stone road dating from the period of the World War I.

←→ 7,5 km, → ¦ ↔ loop, GPS Lat: **59.21257**, Lon: **23.60815** 

### RMK Liivase ranna - Peraküla study trail

The trail starts and ends at Peraküla campsite, Liivase rand (Sandy beach), goes through the typical landscape of the area. Along the trail you can see both young and older pine forests, sand dunes, swampy areas and lakes.

←→ 4,4 km, → ¦ ↔ loop, GPS Lat: 59.22085, Lon: 23.60385

The Peraküla beach is famous for its singing sands and the clear waters of the sea. The campsite has been established to protect the fragile dunes and to provide an opportunity for holiday makers to come as close to the seashore as possible. The sea water is refreshingly cool and warms up by the end of the summer.

There are 16 outdoor spots for campfire, 4 shelters, 4 dry toilets and 3 information boards around the camping site. At one of the spots there is a wooden boardwalk installed, which stretches from the parking lot I the direction of the sea, making this beautiful beach accessible. There is also a small accessible observation platform near the beach. The accessible camping site has wooden boardwalks leading to a wooden shelter and going around the campfire pit. Around the pit there is a ground surface, so to access the fire pit, wheelchair users could need assistance. The wooden boardwalk also connects the wooden shelter to a dry toilet, which does not have arm supports, but has enough space to enter and maneuver with a wheelchair.

### FACILITIES

### 🔰 Laulasmaa beach

Laulasmaa beach got its name from the so-called singing sands, which make it a popular place for swimming and sunbathing. The sand on the beach is white and next to a beautiful pine forest. There are ball courts and you can rent beach equipment from the nearby hotel. A surf school operates on the beach. The seaside is an ideal place for sports, as it offers wonderful opportunities for running, cycling, or Nordic walking. From the hotel footpaths and a wooden boardwalk lead to the beach. At the end of the boardwalk there is a place to rest and relax, also a beach bar which is open in summer. The parking lot is paved with asphalt. When you go around the hotel, there is a stone walkway which leads to the wooden boardwalk. The average width of the wooden boardwalk planks is 80 cm. Attenton! In spring and autumn part of the path may be flooded. When it is raining the wooden footbridges become slippery.

↔ 0,3 km, → ; ↔ out&back, GPS Lat: 59.37503, Lon: 24.23652

# RMK Keilq-Joq Park nature trail

● ← HAAPSALU 49 km TALLINN 81 km

The English landscape park at Keila-Joa is mainly formed by Mother Nature: there are hills covered with trees that alternate with valleys and meadows. The main attraction of the park is the Keila river with its 6,1 m high and 70 m wide waterfall. The nature trail starts at the parking area, goes along the riverbank, past the waterfall to the spaces of the park closest to the sea, and then returns to the parking area.

All in all, it makes a 2–3 hour walk in a unique park forest. Out of the total 2,1 km only the first 250 m of the route is accessible for a wheelchair or baby stroller. To access the stairs leading to the waterfalls, assistance is needed.

HELSINKI 45 km

Spend a relaxed day by the sea in one of the most beautiful seascapes on Finland's coast. In the spring and autumn, when migratory birds fly over the area in large flocks, the area turns into a birdwatcher's paradise. Porkkala is a culturally and naturally rich treasure of Helsinki region.

The Haahka parking lot is about 120 m to the viewing platform. The trail and platform are handicap-accessible. The first trail follows graveled road for about 95 m, width at least 2,5 m. Then trail turns right, towards shore. This stretch is about 25 m long and at least 1,2 m wide. The size of the platform is 8 x 4 m. There is a handicap-accessible dry toilet beside the parking lot.

### THE ESPOO WATERFRONT WALKWAY

Laajalahti is one site along the Espoo Waterfront Walkway (40 km), "Espoon Rantaraitti". It offers hundreds of different points of interest which vary from historic hotspots to beautiful views of nature. You can choose a walking route or take a bike path. In addition to the swimming beaches and boat harbours, there are other interesting places along the path, such as scheduled archipelago boats - for a trip to the islands - and birdwatching towers.

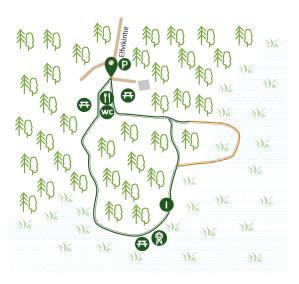

www.visitespoo.fi/en/service/espoo-waterfront-walkway

Laajalahti is one of the best bird wetlands within the Helsinki-Espoo-Vantaa metropolis. It is a fantastic place to observe birds both during migration and at other times. The nature reserve's trail and birdwatching tower offer the perfect services for a day trip. You may also want to see Espoo's Nature House Villa Elfvik.

The accessible trail is about 1 km long and at least 1,2 m wide. It is possible to do an extra loop (230 m) through the bed of fascinating reeds. The strech of the reed is covered with a 1,05 m wide wooden boardwalk with a few resting places where you may pass by other visitors. On this strech, visitors in wheelchairs need an assistant due to a slope at the other end of the wooden boardwalk. Elsewhere, an assistant is not needed. There are information boards along the trail. The first floor of the birdwatching tower is accessible, as is the Nature House itself.

### SIPOONKORPI NATIONAL PARK

The woodlands of Sipoonkorpi lie within easy reach of the Finnish capital, surrounded by rolling fields and picturesque villages; Sipoonkorpi National Park is a mixture of wilderness areas and traditional landscapes. Sipoonkorpi's peaceful settings are a welcome green haven for local townies, especially in late summer and autumn when anyone can come here to gather plentiful wild mushrooms and berries. Almost all woodland mammal and bird species of Southern Finland can be found in this national park.

Sipoonkorpi National Park can be reached via six access points along its perimeter. The length of its trails vary and altogether, it has over 20 km of marked trails. Also available are cooking shelters, campfire spaces, dry toilets and lean-to shelters. Beside hiking, you may enjoy, for example, jogging, geocaching, climbing and cycling. At the end of your trip, you may taste traditional smoke saunas and modern electric saunas heated daily at Café Kuusijärvi (cafekuusijarvi.fi), where swimming is also possible year-round.

### TEIJO NATIONAL PARK

Teijo National Park's attractions include peaceful lakes and forests, as well as historic ironworks villages where traditional crafts still thrive. From these picturesque settlements, you can head straight out to explore the lakes, seashores, marshes and forests of the national park – and go hiking, canoeing fishing or biking. You can get a good taste of Teijo on a day trip, but it's also well worth staying over – out in the wilds under a starry sky, or in cosy lodgings in a charming village.

There are about 50 km of marked trails in Teijo National Park. Most of the trails are 2-8 km long, and suitable for day trips, but by combining them it is possible to make a hiking trip that lasts for a weekend. Biking Route "Rannikkoreitti" passes Teijo National Park and also MTB enthusiasts find service in this region. Charming iron works villages offer accommodation for every economy, from simple Bed & Breakfast to a comfortable hotel.

FORSSA 26 km

Lakes and scenic forests dominate the northern part of Liesiärvi National Park. One can easily spend half day or longer on the Peukaloisenpolku Trail – possibly even overnight there enjoying the landscape. The trail is one of the longest accessible trails in Southern Finland, though it is demanding, as it features a few points with inclinations, so assitance is needed for visitors in wheelchairs.

The trail begins at Peukalampi parking lot. When travelling clockwise, the first stretch (1,5 km) follows a 2,5 m wide graveled road. This strech ends at Tittilampi, which is a rental campsite with accessible service for groups; a hut, a dry toilet and a fire pit.

From Tittilampi trail continues along a 2,5 m wide graveled road for another 800 m until a rest area called Kaksvetinen. An accessible campfire place, a Lapp hut and a dry toilet are situated beside a beautiful lake. Staying overnight is an option in the Lapp hut, as is lighting a campfire during a forest fire alarm.

The stretch of trail from Kaksvetinen to the rest area by Peukalolammi is 1,2 km long. Beautiful forests surround you the whole way.

At Peukalolammi the accessible campfire place and toilet are situated on top of the small hill. From there, the trail follows a 2,5 m wide road to the parking lot. The length of this section is 600 m.

### KURJENRAHKA NATIONAL PARK

Within easy reach of the historic town of Turku, the forests and marshes of Kurjenrahka are home to many wild animals and birds, including stately long-legged cranes and curious woodland owls. The marked trails of Kurjenrahka National Park (www.nationalparks.fi/kurjenrahka), together with the larger hiking trail networks 'Kuhankuonon retkeilyreitistö' and 'Suokullan reitti' (www.kuhankuono.fi), make up almost 300 kilometres of trails. There are many loop trails suitable for half-day hikes, but the trail networks and facilities also allow for longer walks and

ମ୍ୟ

GPS Lat: 60.73989, Lon: 22.41580

### FACILITIES

Within half an hour's drive from the city of Turku to Kurjenrahka National Park, your setting changes from busy town life to a slower pace of uninhabited forests and marshes. Along the Karpalopolku Trail, your senses are filled with the aromas of the marshes and with the sounds of the forests. And however often you visit the national park, the sensations are always unique. Along Karpalopolku, you also see the famous Kuhankuono Stone, a border stone of seven communes.

Along the Karpalopolku Trail, there is both a wooden boardwalk (0.3 km) and a graveled path (1.4 km), in different sections. The trail is at its narrowest (just 1.1 m wide) along the strecthes of wooden boardwalks. The trail undulates gently, both vertically and horizontally. Due to inclines, assistance is needed for visitors in wheelchairs. There are a lot of benhces for resting along the trail. The viewing platform on the forest islet beside the marsh is a good place for a picnic.

Leading away from the parking lot is another 100 m long trail to the Kurjenpesä area. There you can find accessible services like a cooking shelter, the Nature Infor-mation Hut, a dry toilet and a viewing platform from which you can enjoy the scenery of Lake Savojärvi. There is also a tentsite.

### PUURIJÄRVI AND ISOSUO NATIONAL PARK

Puurijärvi and Isosuo National Park is a recommendable place to visit for bird enthusiasts. The bird sanctuary gives you time to slow down, stop, look and listen. Climb up to the roofed birdwatching tower on Kärjenkallio, one of the largest in the Nordic countries, with room for around 50 people. The birdwatching towers on the southern side of Lake Puurijärvi, in Mutilahti and on the northern side, in Ahvenus, are approximately four metres high. A nature watching tower is located also on Isosuo Mire. On the Isosuo Mire there is also a nature trail (2 km in length) introducing visitors to the mysteries of the marshland. In Puurijärvi and Isosuo National Park, you can easily spend half a day or longer.

www.nationalparks.fi/puurijarvi-isosuo

This national park protects a peaceful oasis of wild marshlands and lakeshores rich in bird life in a region primarily dominated by farmland. Bring your binoculars and scan the skies to search for the park's many winged inhabitants while enjoying the ever-changing natural scene.

The beginning of the trail leading from Kärjenkallio parking lot to the birdwatching tower is suited for use by disabled visitors though an assistant is needed for visitors in wheelchairs. This 400 m long and 2 m wide stretch is demanding due to its inclines and descents. After 400 metres, you find an accessible viewing platform (4 x 13 m) with a ramp where the width is 1.05 m. Beside the platform, you will find information boards about the area. There are some resting places along the route. There is an accessible dry toilet at the parking lot and tables both at the parking lot and at the viewing platform.

Kärjenkallio Trail

HELSINKI 186 km TAMPERE 66 km

0	PUURIJÄRVI AND ISOSUO NATIONAL PARK, KOKEMÄKI Suggested starting point: Kärjenkallio parking lot, Yttiläntie 981
GPS	Lat: 61.28063, Lon: 22.56509
OPEN	IV-XI, 24/7
X	0,5 h (one way)
$\longleftrightarrow$	0,4 km (one way)
—	Orange wooden squares
→¦G	Out-and- back
2	There are four points where incline is over 8%. Near the parking lot is the steepest and longest incline when heading to the tower; 11% and 42 m. At the rest of the three points, the gradient varies between 9 and 10% and the length varies between 12 and 16 m.

### YYTERI SILT AREAS

On the routes by the coast of the Bothnian Sea in the Pori region, you get to admire meadow and silt areas packed with birds, grass areas and coastal forests. The Yyteri silt areas are an excellent spot for watching the migration of Arctic species. Thousands of migrating birds stop at the silts to eat and rest, which makes it easy to observe them.

There are more than fifteen (15) nature observation towers and platforms with free entry year-round to delight birdwatchers and everyone interested in nature. The City of Pori maintains nature trails which are partly located in the Bothnian Sea National Park area. The routes are marked with signposts, and the silt area has wooden boardwalks.

GPS Lat: 61.53841, Lon: 21.56612

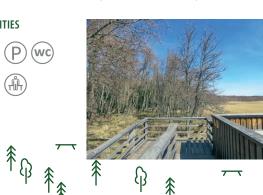

The seashores in the Pori region are famous for the rich bird life which can be observed from several bird watching towers and platforms. The City of Pori maintains nature trails in the Yyteri silt area that are partly located in the vicinity of the Bothnian Sea National Park. The handicap-accessible viewing platform at Langoura is one of them.

FACILITIES

 $(\mathbf{i})$ 

(Å)

From the viewing platform, there is a view over Huhtala Bay, which has plenty of variety of birds from April to September. The route from the parking lot to the platform is 100 m long and handicap-accessible. The average width of the path is 1,5 m. The ramp to the platform is 45 m long, though divided into streches, and the width of the ramp is 1,2 m. The size of the platform is 5 x 6 m. There is a handicap-accessible toilet beside the platform.

0	BOTHNIAN SEA NATIONAL PARK, Pori
	Suggested starting point: Huhtala parking lot, Huhtalanraitti 206
GPS	Lat: 61.53828, Lon: 21.56625
OPEN	IV-XI, 24/7
Ø	0,5 h
$\longleftrightarrow$	0,1 km (one way)
—	Not marked, but can easily follow the trail
→¦G	Out-and-back
2	The viewing platform has a slope of 8%. The width is 1,2 m and the length is 45 m. The ramp is divided into six streches, each 6-8 m long with resting areas in between. There is a railing all the way to the platform.
*	The parking lot and the nearly all of the trail are covered with hard gravel. The 15 m strech before the ramp is flat forest path where the surface can be softer after heavy rain.

This Guidebook has been produced with the financial assistance of the Central Baltic Programme 2014 - 2020 as part of the Project No CB786 "Nature Access to All" (NatAc).

The project aims at facilitating access to nature tourism by developing the chain of accessible nature tourism sites in the core Central Baltic area in Latvia, Estonia and Finland. The project is being implemented by the Kurzeme Planning Region in cooperation with NGO West-Estonia Tourism, Estonian Environmental Board, Pärnu City Government and Parks & Wildlife Finland (Metsähallitus). Apart from this Guidebook, over the 2,5 years of project implementation, the project partners have improved 14 existing nature sites in three regions (western Latvia, western Estonia and southwest Finland) to become accessible to all, including people with disabilities, seniors, parents with small children etc, as well as carried out a number of other activities to promote understanding and encourage trail administrators to introducing nature accessibility solutions.

The total project financing is 965 773,05 EUR, including 762 931,77 EUR from the European Regional Development Fund.

The contents of this Guidebook are the sole responsibility of Kurzeme Planning Region and can under no circumstances be regarded as reflecting the position of the European Union.

**Trail inspections:** Alise Lüse, Tõiv Jõul, Orvika Reilend, Laura Lehtonen, Kati Aus, Triin Vasli, Elisabet Mast, Nele Sõber

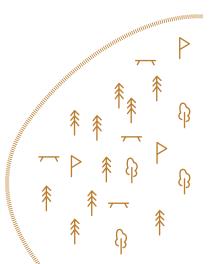

Design and typesetting: Piektdien Piektajā Piecos Ltd.

We express our appreciation to all tourism information centres and project partners in Latvia, Estonia and Finland, who contributed to the development of this Travel Guide. Special thanks to Jānis Viškers, Jurģis Briedis, Ivars Balodis, Helen Kask, Petri Rissanen, Jukka Parviainen, Teemu Lakkasuo, Johanna Hätönen and Ari Kurppa.
